**How to connect to the City's Cisco VPN**

Here are some written instructions that will help get you connected to the City's Cisco VPN. **This assumes you have Cisco AnyConnect Installed on your computer to start with.**

1. Open Cisco AnyConnect on your Computer

2. Once opened type in the following address:
  - a. `vpn.angolain.org:4433`
3. The VPN windows should look like below

4. Now Hit connect and when asked put in your City Login information
5. If you are having issues getting the VPN to connect make sure that you are on a wireless that is not one of the City's. If you are on your home network or your MIFI you should be able to connect to the City through the VPN.
6. If it pops up for your username and password the VPN has connected to the City. If login fails with username and password make sure you are typing it correctly and Caps Lock is not on.
